# HALO

HALO CLIPS
RECOMMENDED INSTALLATION METHOD

The **HALO INSTALLATION CLIP** has been developed to provide a tailor-made installation option that is engineered exclusively for all our **HALO** LED Strip Lighting Systems, providing a lightweight and robust construction fixing method that enables a rapid and proficient installation.
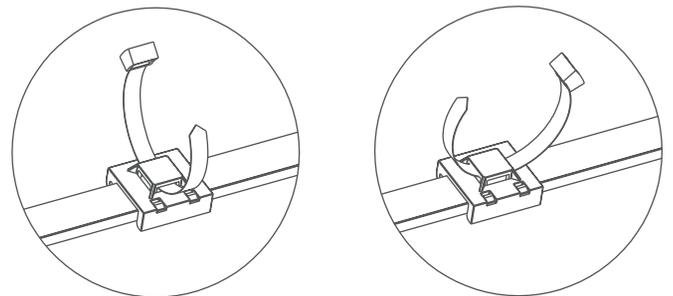

Weight: 2.5 grams
Material: Flame retardant polycarbonate UL94-VO

DESIGN & INSTALLATION

The **HALO Installation Clip** has been specifically developed as a tailor-made mounting solution, engineered exclusively for all **HALO** LED Strip Lighting Systems. Designed for both strength and simplicity, it provides a lightweight yet robust fixing method that ensures secure placement while enabling fast, efficient, and professional installation.

The clips should be installed at **1m** intervals. Once the PVC straps have been correctly tensioned and the clips securely fastened to the supporting infrastructure, the **HALO** LED Lighting can be positioned within the clips. The lighting should then be lightly tensioned by hand to eliminate any sagging and ensure a straight, uniform appearance. Thereafter, the topside cover is firmly pressed down over the LED strip, clipping securely into the underside section to create a snug and stable fastening. This method ensures optimal support, alignment, and long-term stability of the **HALO** LED Lighting system.
